

Installing the Multi-User Network Version of Best Case® Bankruptcy

Our **Multi-user Network Version** allows several people to use Best Case Bankruptcy simultaneously on a network. Users can even access the same client file at the same time. If you install Best Case Bankruptcy on a network, all users will have access to the same client information and Common Creditor List. You'll only install Best Case Bankruptcy ONCE.

To install on a network:

1. Exit all programs that are currently running. (This will speed up the installation process and minimize the chance of errors.)
2. Installation will begin when you insert the CD-ROM. If installation does not automatically begin after a minute:
 - a. Click the Start button on the Taskbar then choose Settings.
 - b. Choose Control Panel then double click "Add/Remove Programs" in the Control Panel window.
 - c. Click the Install button then follow the on-screen instructions, substituting your network drive letter for the C: drive in the destination directory box.
3. From each workstation, create a shortcut from the desktop that points to the BESTCASE\winbfs.exe file on your network drive. Go to the blank desktop where you see all of your program icons. Hold the mouse in the blank space, not over any icon, and press the right mouse button. Go to New, then Shortcut. In the command line, type the network drive letter, then BESTCASE\winbfs.exe. For example, if your network drive is F:, you'll type f:\BESTCASE\winbfs.exe. Click Next. When asked for a name for the shortcut, type Best Case Bankruptcy. Click Finish.
4. Repeat step 3 for other workstations.
5. Most network operating systems allow you to assign specific "rights" to users within each directory. All users who will be running Best Case Bankruptcy should be granted FULL rights to the \BESTCASE directory and all of its subdirectories.
6. The network version requires that each user have a personal work directory for temporary files that are created during the print process. The default location for these files is on the local hard drive in the C:\BESTCASE directory. This local directory will be created automatically when the user starts Best Case Bankruptcy. (If your client computers do not have local hard drives, please contact us for alternative instructions.)

Your program will function in demo mode until you Enter Unlock Information. (You only need to enter it once for the network version.)
